

NTT DATA

Accelerate better R&D decision making by integration and analytics of real world data and digital health technologies.

Precision medicine requires

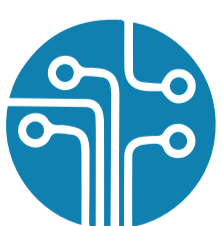

- Precise selection of patients for inclusion in clinical trials
- Stratification of patients into responders, non-responders and adverse responders, based on health outcomes and profiles

Value-based pay-for-performance reimbursement requires

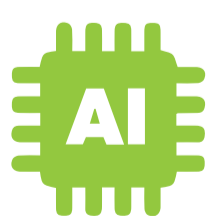

- Aggregation, integration and analytics of clinical trials data, real world data and public databases (Structured and unstructured) help extract patient benefits and outcomes

Partner with NTT DATA to transform R&D and improve Patient Experience with:

Digital Tech

Connected health, Wearables, Mobile App, Blockchain.

Advanced Analytics

Machine Learning, Cognitive computing.

Big Data

Aggregation, Normalization and Integration.

Robotic Process Automation

Clinical Trials, Drug Discovery, In-silico drug safety testing
