

# HFS Highlight: NTT DATA's Nucleus for Healthcare's psychographics drive to personalized care

JUNE 2021

---

Rohan Kulkarni, Vice President, Research

Rain, rain, everywhere but not a drop to drink. That is the story in healthcare, a treasure trove of fragmented data that is minimally converted into information for the benefit of health consumers. However, it appears NTT DATA may be headed to bridging the data archipelago to help improve consumer and provider experience; a core attribute of the Triple Aim (cost of care, health outcomes and experience).

### True 360-degree view of the health consumer could turn engagement on its head

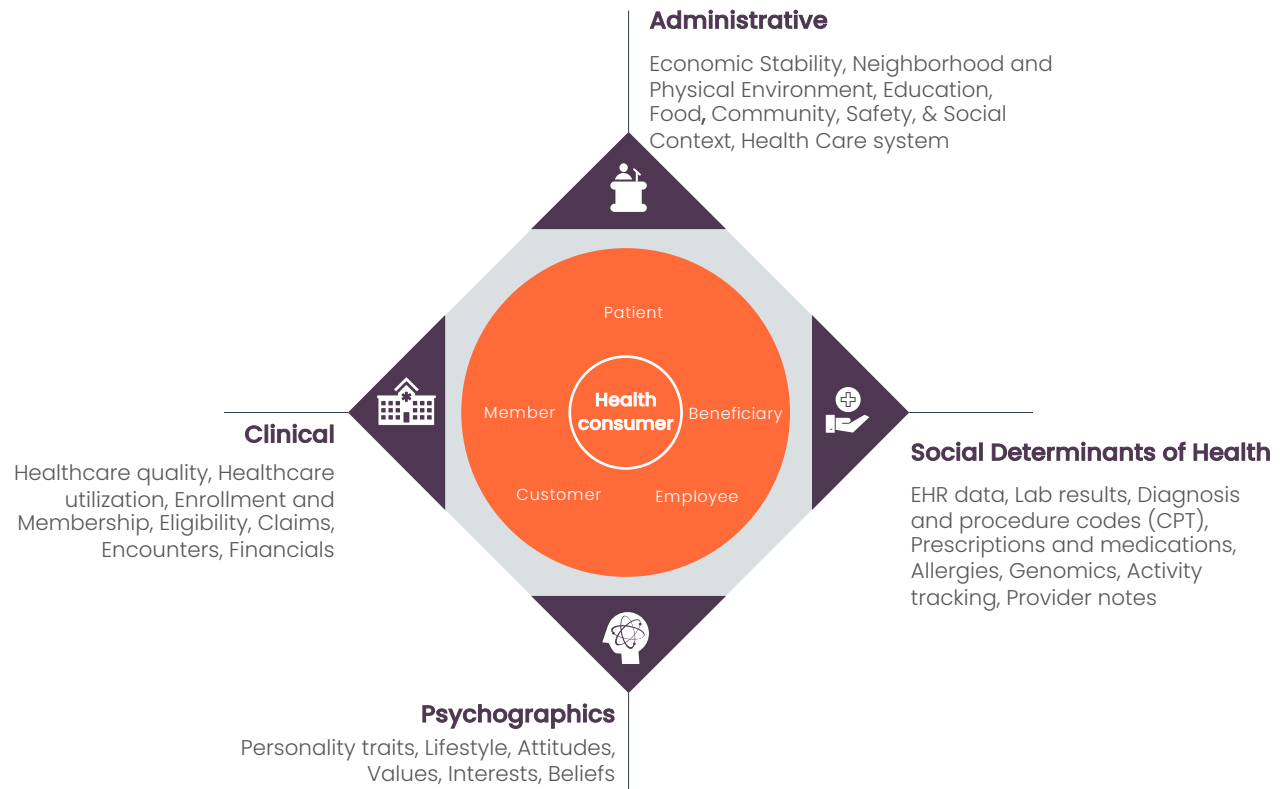

Administrative data (enrollment, claims, etc.) and clinical data (EHR, medication, etc.) are typical transactional elements health plans and providers maintain.

Adding SDoH or social determinants of health (education, physical environment, etc.) is not very hard given membership carries some of it and can be further augmented through a variety of public sources. The last group to consider is Psychographic (attitudes, beliefs, etc.) which rounds out all the data required to form a true 360-degree view (see Exhibit 1) of a health consumer.

NTT DATA Nucleus for Healthcare is a platform powered by emerging tech (AI, Automation, Blockchain, Analytics, etc.) with a broad set of service capabilities including Patient Engagement, Patient Access, Clinical Engagement, Population Health, and Revenue Cycle Management (RCM).

#### Exhibit 1

### Data attributes that can form a 360-degree view of the health consumer

Source: HFS Research, 2021, data attributes are sample and not exhaustive

An underlying capability that could be a health consumer engagement game-changer is the platform's ability to incorporate psychographic attributes. Imagine the boost psychographic data can give personalized care and medicine with the power of its emotional intelligence that can enhance the delivery and consumption efficacy.

When psychographic data elements are combined with administrative, clinical, and social determinants of health (SDoH) data, we can connect with consumers at both a cerebral and an emotional level. This connectivity paradigm could fundamentally change how engagement can be established in support of health and the delivery of healthcare.

### **Combating technology-induced alert fatigue with technology**

Doctors and nurses are an intrinsically tired group given their hours and the stress of their responsibility.

Technologies' insistence on keeping them constantly updated through their wearables has exacerbated the situation. A Journal of Medical Internet Research found that 80% to 99% of alarms are false or clinically insignificant and do not represent a real danger for patients. Alert fatigue can cause anxiety, sleep deprivation, clinician burnout, and impact patient safety.

Nucleus for Healthcare attempts to address it with their "next best action" algorithm. This allows prioritizing alerts while bundling non-urgent alerts together and delivering them as a function of the next best actions. This approach while not uncommon is certainly differentiated by the quality of the algorithms driving the prioritizations.

Addressing alert fatigue amongst clinicians will aid in improving their experience in the delivery of healthcare which is critical.

## **The Bottom Line: Practical solutions to improving both the consumer and provider experience is critical to moving the needle in the pursuit of improving the Triple Aim**

The ability to combine SDoH with psychographic information is an opportunity to craft a true 360-degree view of the health consumer to fundamentally transform engagement will influence the Triple Aim goal of enhancing the experience of care. Nucleus for Healthcare may just have a bead on it.

## HFS Research author

### **Rohan Kulkarni | Vice President, Research**

Rohan leads the Healthcare practice at HFS, bringing to bear his vast experience across the healthcare ecosystem. His experience includes being the Head of Healthcare Strategy at multiple fortune 500 companies, Product Management leader and CIO at two Health Plans. He is passionate about the Triple Aim (improving health outcomes, reducing the cost of care & enhancing the care experience) and believes that health & healthcare is a polymathic opportunity that intersects with every industry and facet of our lives. His well-rounded experience & passion brings a practical approach to his analyst role at HFS.

## About HFS Research: Insight, Inspiration, Impact

HFS is a unique analyst organization that combines deep visionary expertise with rapid demand side analysis of the Global 2000. Its outlook for the future is admired across the global technology and business operations industries. Its analysts are respected for their no-nonsense insights based on demand side data and engagements with industry practitioners.

HFS Research introduced the world to terms such as "RPA" (Robotic Process Automation) in 2012 and more recently, the HFS OneOffice™. The HFS mission is to provide visionary insight into the major innovations impacting business operations such as Automation, Artificial Intelligence, Blockchain, Internet of Things, Digital Business Models and Smart Analytics.
